SAGA.M31 – GALAXY –

VERSION 1.0 NOW AVAILABLE

Alzey, 26. April 2005

SAGA D.C. GmbH, an German software company located in Alzey, has announced today that their latest product, SAGA.M31 – Galaxy – is now available as Version 1.0. This product enables organizations to implement their SOA strategy into the data access and integration area. SAGA.M31 – Galaxy – provides easy access to SQL, LDAP or 3270-Mainframe data via XML or Web Services. Within 15 minutes data can be implemented as a Web Service without coding a single statement. This provides cost savings and easy migration paths for any company. Also available is an Eclipse-Plugin that integrates the Containers of SAGA.M31 – Galaxy – into any Java-Application.

After six months of pre-release, SAGA D.C. GmbH, a German software company located in Alzey, has today announced the General Availability of their Data-Integration Server SAGA.M31 – Galaxy –. Version 1.0 requires any Servlet Container like Jakarta Tomcat or IBM WebSphere.

Any Data that resides in SQL, LDAP or 3270-Mainframe are able to get integrated into other projects within minutes. SAGA.M31 – Galaxy – can provide a Web Service for every integrated Container. WSDL are generated automatically, so need to code a single statement. Looking on the different SOA strategies at the organizations today, SAGA.M31 – Galaxy – provides a simple Service for Data Access and Integration. The administration and configuration is done via a WUI (Web User Interface).

As an add-on, SAGA D.C. provides an Eclipse-Plugin that makes it easy to integrate the containers of SAGA.M31 – Galaxy – into any JAVA Application.

SAGA.M31 – Galaxy – is offered with three different License Models.

The **Developer Edition** and **Limited Edition** are free and can be downloaded directly from the SAGA.M31 – Galaxy – product website under <http://galaxy.sagadc.com> . Basically the differences are in the number of concurrent connectors and the number of servers per organization.

The commercial version – called the **Professional Edition** - is licensed based upon the number of servers and concurrent containers. A Standby-Server is always licensed for backup purposes. The Professional Edition comes with a wide range of Features for better audits, more flexible container logic and more secure implementation.

“After the great success of our pre-releases, we are confident that the final Version 1.0 will exceed our expectations in the market” said Jochen Grotepass, Managing Director of SAGA D.C. GmbH.

Pressemitteilung

Early April, SAGA D.C. already got a first commercial order for **SAGA.M31 – Galaxy – Professional Edition**. The customer was convinced on the cost savings that **SAGA.M31 – Galaxy –** has provided during the test phase. In a short period of time, the customer was able to create services that already amortize the investment.
